

Dinkey Collaborative January 2015

At the Dinkey Collaborative's January 15 meeting, Ms. Jody Nickerson, Exchequer IDT Team Lead, presented the final revisions made to the Exchequer Proposed Action. This included the addition of design criteria for aquatic and riparian species and habitat, including the Yosemite toad and Sierra Nevada yellow-legged frog. With one exception, members recommended the proposed action to the Forest and provided letters of support. The Collaborative also recommended final goals for 2015 to the Forest. The Collaborative also discussed draft socioeconomic monitoring objectives and questions. Finally, the group began the initial planning for the February 2016 Monitoring and Science Symposium, and requested volunteers for the work group.
